

---

Format           CALL VCHAR(row,column,character-code)  
  
                  CALL VCHAR(row,column,character-code,  
                  repetition[,...])

### Description

See EXTENDED BASIC MANUAL page 188 for more data. The only change to VCHAR is the auto-repeat function. Notice the new auto-repeat must have the repetitions used or it gets row confused with repetitions.

### Programs

This line puts character 38 at row 1 column 1 for 99 times, then puts character code 87 at row 9 column 1	>100 CALL VCHAR(1,1,38,99,9,1 ,87)
Fills screen with characters.	>100 CALL VCHAR(1,1,32,768,1, 1,65,768,1,1,97,768,1,1,30, 768) :: GOTO 100

### Options

CALL VCHAR in RXB is faster than normal XB as separate line numbers are needed to continue placing characters on screen. See HCHAR, HPUT, VPUT, HGET and VGET.
