

Format DEL start line-end line

Description

The DEL command is used to delete a line or block of lines from a program. Start line number and end line number define the lines to be deleted. If start line number is omitted, line deletion will begin at the first line of the program. In this case, end line number must be preceded by a dash. If end line number is omitted, line deletion will end at the last line of the program. If start line number and end line number are omitted, then the first line number of the program to the last line number of the program is deleted. At least one valid program line must exist between start line number and end line number or a Bad Line Number Error will be reported. If only one line number is given without a dash, then that one line will be deleted.

After the DEL command has executed any open files are closed and all variables are lost.

Commands

Lines 100 to 150 are deleted.		>DEL 100-150
Line 10 is deleted.		>DEL 10
Line 5 to last line are deleted.		>DEL 5-
