Format   CALL ONKEY(string,key-unit,return-variable,
                status-variable) GOTO line-number[,...]

                CALL ONKEY(string-variable,key-unit,
                return-variable,status-variable)
                GOTO line-number[,...]

Description

ONKEY compares a string or string-variable characters one at
a time to the key return-variable until a match is found.
The string length may be longer then the number of GOTO
line-number list. But a error results if that key is pressed
as no line-number corresponds with the position of the key.
If the string length is less than the number of GOTO line-
numbers then the extra GOTO line-numbers are not used.
The position of the characters in the string correspond to
the GOTO line-number in the list. i.e. string "12345"
GOTO 1,2,3,4,5 in the example:

CALL ONKEY("12345",0,K,S) GOTO 10,20,30,40,50
The key pressed like say 3 means line 30 will be used.

Another example:
10 CALL ONKEY("Test",0,K,S) GOTO 22,29,34,41
If T is pressed then 22 is used.
If e is pressed then 29 is used.
If s is pressed then 34 is used.
If s is pressed then 34 is used.
