

## Format

LIST

LIST "device name"

LIST "device name":line length:start line-  
end line

## Description

The LIST command is the same as per Extended Basic Manual page 114. The LIST routine has been modified to allow the line length to be output to a device. The line length can only be used if a device is specified. A colon (:) must follow the line length. If not included in the LIST command, the line length is set to the default of the specified output device.

The line length can range from 1 to 255. If the length specified is outside this range, a Bad Line Number Error is reported.

## Command

This line outputs to a device.	>LIST "PIO":80:100-120
--------------------------------	------------------------

This line outputs to a device.	>LIST "RS232.BA=1200":132:
--------------------------------	----------------------------

This a dummy line.	>100 ! TEST OF LIST
--------------------	---------------------

Another dummy line.	>110 ! TEST OF LIST
---------------------	---------------------
